Dear Reg,

4 from

Please find enclosed our third ~~tonometer~~ for conversion to the LED lighting system.

We have found this to greatly improve performance of the tonometers. I now use minimal fluorescein, leaving my patients looking normal instead of with the famous post-eye-examination "yellow eyes". I never need to turn off the room lights, previously essential, and feel my results are more accurate as the tonometer mires are very clearly seen and interpreted.

Regards,

Elaine Bryant

Dear Mario,

I have been so pleased with my the conversion of my tonometer to the LED system, that I have now converted all the tonometers in our practices.

Our 4 optometrists are really pleased with the improved quality and brightness of the images seen.

Regards
Darryl

Dear Mario,

I thought you would be interested to know that the conversion of my Perkins tonometer to an LED lighting system has been a complete success.

The brightness is quite amazing and I have not had any situations where I struggled to see the mires. This is the opposite of the previous arrangement, where the globe's brightness was only ever reasonable with brand new batteries.

Tonometry is now a great deal easier, quicker and requires half as much fluorescein as before.

Thank you for suggesting the change.

Best wishes,

Ian Gutteridge

Mario

All optoms agree on these words

Since you changed the illumination system on our perkins they are fantastic. Easily allined and easily seen.
Best clinical decision in years

Dear Mario,

Feedback on our Perkins tonometer upgrades, as requested.

We have had about 15 of our Perkins tonometers upgraded to the LED illumination in the past year. The response of the staff in using them has been uniformly positive. The instruments are now easier to use and the maintenance of them simplified.

Thanks for your initiative in developing this innovative upgrade to the Perkins tonometers.
