

Mario from MS safe upgraded both my slit lamp and monocular indirect Ophthalmoscope with the new LED technology recently. This has made an amazing difference to how I now see things. The light is brighter and more true to color and especially with the slit lamp it makes corneal sections 'pop'. Retro and indirect illumination is a highlight as things within the anterior chamber are now very visible given the intensity of the white light. Interestingly, patients find the glare quite tolerable throughout the examination.

Mario's turnaround was incredibly quick. He fitted my 20 year old West German Zeiss slit lamp within the week even though he had to machine and fit a new adaptor for the LED globe.

I can highly recommend the team at MS safe for their professionalism and prompt service.
